

9x14-Q3,Q4

Current model, has an Upper Net Rail

Vertical poles sit in welded sockets and are no longer in line with the leg uprights
The pads have cutouts in the outer flap to go around the sockets.

9x14-Q1,Q2

Earlier models, don't have any Upper Net Rail

Vertical poles attach to the leg uprights

5th Feb 2020 - The Q1/Q2 Pad spare part has now been superseded.

We now only stock the Q3/Q4 as a spare part as these have all the latest improvements, see below.

The Q3/Q4 pads will fit the Q1/Q2 trampoline, the only difference is that there will be visible cutouts in the pad outer skirt as highlighted.

(because the location of the vertical net poles on all sides is different between the above models)

This doesn't affect the safety function of the pad but when fitting the latest pad to an earlier model (Q1/Q2) you can see the outer frame where these cutouts are.

This is more than offset by the Q3/Q4 Pad improvements, which are;

- Higher quality PVC outer material.
- Double stitched seams.
- Pad foam changed from one thickness to tapered thickness, 50mm at the outer frame edge and 25mm thickness at the mat edge. this keeps the main foam thickness where its needed (outer frame) with additional benefit of quick rain run off while minimizing the stepped level at the mat edge.
- Robust 4mm bungee cord attachment system replaces elastic strips.
- Drain holes underneath.
